

User Manual

Quick Trader Widget

This application is not an ordinary calculator. It calculates values like pips, swap points, effective leverage but that's not all. Additionally it allows for quick and intuitive trading, thus after making all the calculations you can open trades on the app itself.

Log in procedure

In order to log in to the application you have to first of all, enter your trading account credentials in the form of login number and password. Then, choose the environment which you would like to log in to – DEMO or REAL.

Finally, read the legal notice, accept it and click "Login" in order to run the application.

The image shows a screenshot of a 'Login' dialog box. The dialog has a title bar with a close button (X) on the right. It contains three input fields: 'Login' with the text '123456', 'Password' with seven dots, and 'Server' with a dropdown menu showing 'REAL'. Below the input fields is a checkbox labeled 'Accept legal notice' which is checked. An 'OK' button is located at the bottom right of the dialog.

Functionality of Quick Trader Calculator

After successful logging to the application, in the upper-left corner you will have actual symbol prices which are being refreshed in real time.

In order to calculate the value of some symbol, you have to choose an instrument by clicking one from the list on the left and then all values are filled automatically. Please note that you decide what the application calculates by entering the appropriate value into a particular gap.

For example, enter volume and T/P value, click "Calculate BUY" and you can observe that values in other gaps have changed and showed you the exact information as if you have opened such a trade.

If you decide to open your calculated trade, you just click on either the BUY or SELL button.
